(a) the saddle nudged both ways (schematic)
saddle
uniform
crystal
grows
near the edge the growing side
stops in a pinned state: Fig. 7(a)
(b) energy released
89.88 a_0
90.2 a_0
90.27 a_0
90.272 a_0
shrinking side
growing side
$\Omega_s - \Omega_U$
$\Omega_s - \Omega$ ($\hbar\omega_\perp$)
descent iteration
(c) growing side: nucleus size
$-\Delta N$ (atoms expelled)
descent iteration
(d) shrinking side
peak contrast
descent iteration
